Domain

Introducing Domain, the compact work hub for any application. The Domain Pod features a rotating seat within built storage. The rotating seat improves accessibility and comfort while the storage provides a place to keep your belongings safe. The compact laminate work-surface and pod base provides robust yet sleek surfaces that are tough enough to handle level 6 commercial use.

Power/USB can be accessed via the outlets conveniently located under the work surface. This position of outlets serves to maximise the working surface available whilst keeping plugs and cables out of tripping hazard zones. The fully upholstered screen provides a comfortable backrest as well as fantastic acoustic absorption properties. The Domain pod can be easily moved and positioned for the desired applications such as group work, test environments and individual break out areas.
