commercial furniture

Eben introduces a unique and exclusive mechanism, called Synchro Atom, which eliminates the need for a separate tension control. Through an innovative system, the backrest and the seat recline together, providing perfect support for the user's back, keeping it in contact with the backrest at all times.

Meanwhile, the mechanism adapts to the weight of the user, offering the correct backrest resistance. No separate adjustment is needed. The adjustable seat depth brings these features to a wider range of users.

Eben
